CONTROLLED SUBSTANCE ORDERING SYSTEM

Meeting Your Needs

CuraScript SD understands how an unexpected delay receiving pharmaceutical product can impact your practice's ability to administer patient care. As an industry-leading specialty distributor, we have spent many years working closely with our customers to understand your practice dynamics and delivering innovative solutions that support your overall practice efficiency and profitability.

CuraScript SD is pleased to announce the recent availability of electronic 222 Schedule II narcotics ordering on www.curascripts.com using the DEA's Controlled Substance Ordering System software integration. The benefits are significant and they include:

- Simple, accurate ordering process nearly eliminates form and line rejections
- Reduced spend by eliminating mailing costs of traditional 222 forms as well as C2 handling fees waived
- No line item limit and integrated ordering on www.curascripts.com means you can combine your purchasing tasks into a single transaction
- Integrated reporting tools to assist with inventory management

Important Information

To comply with DEA regulations and prevent diversion of controlled substances, CuraScript SD requires a valid DEA license and a complete and correct Intent to Purchase Controlled Substances form on file.

In addition, CuraScript SD establishes the authorization status of each person seeking to order a controlled substance and only accepts orders from persons legally authorized to place them.

The CSOS Online Process

01 | Apply for DEA License

The Purchaser enrolls with the DEA (this is a 4-6 week process). After approval, the Purchaser is issued their CSOS Certificate. This eliminates the paper 222 Form.

02 | CuraScript SD On-Boarding

CuraScript SD CSOS Online Administrator will be available to review the on-boarding process.

03 | Submit e222 Order

The Purchaser places an electronic 222 order with CuraScript SD, and digitally signs the order using their CSOS Online Certificate.

04 | Validation Process

After the order is digitally signed and submitted then CuraScript SD does a CSOS Online Certificate validation with the DEA.

05 | Fulfillment

CuraScript SD ships the order to the Purchaser. The transactions of Controlled Substances are reported to the DEA by CuraScript SD.

06 | Delivery
